Helicopter Noise Exposure Curves for Use in Environmental Impact Assessment

by
J. Steven Newman
Edward J. Rickley
Tyrone L. Bland

November 1982
Final Report

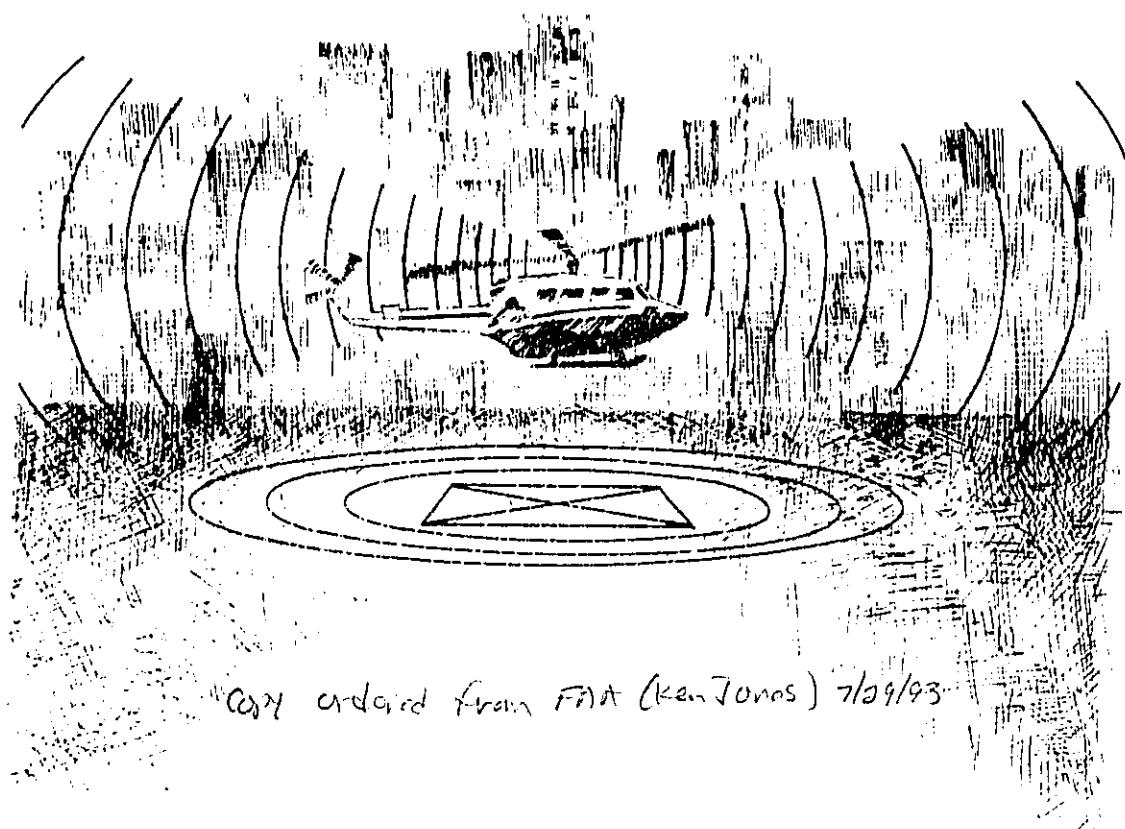

U.S. Department of Transportation
Federal Aviation Administration
Office of Environment and Energy
Washington, D.C. 20591

Document is Available to the U.S.
Public Through the National
Technical Information Service
Springfield, Virginia 22161

Report No. FAA-EE-82-16

US Department
of Transportation
Federal Aviation
Administration

Copy ordered from FAA (Ken Jones) 7/29/93

FOREWARD

The FAA has been conducting controlled helicopter noise measurement programs since 1976. The data have been used for a variety of purposes, including evaluation of proposed U.S. and international noise standards and validation of helicopter noise prediction methodologies.

This report documents the results of FAA measurement programs conducted in 1976, 1978, and 1980 in a single report with data formatted specifically for environmental impact analyses. In recognition of growing public concern over potentially adverse noise impact associated with helicopter operations, the FAA encourages helicopter and heliport operators to analyze noise impact as part of the normal heliport planning process. The data base contained in this report provides the noise input information necessary to develop helicopter noise exposure footprints or contours using a computer model such as the FAA Integrated Noise Model (INM).

HELICOPTER NOISE SURVEY FOR SELECTED CITIES IN THE CONTIGUOUS UNITED STATES

This document is available to the
U.S. public through the National
Technical Information Service, Virginia 22161

CHAPTER 1

INTRODUCTION

Civilian helicopter traffic is growing rapidly and the resulting noise is becoming increasingly noticeable, especially in major urban areas. The frequency of complaints about helicopter noise has remained relatively low, probably because of the efforts of helicopter operators, heliport operators, urban planning officials and the FAA to keep community noise impacts at a minimum through such measures as routing helicopters away from noise-sensitive land uses and operating helicopters so as to minimize the levels of noise emitted and transmitted to the ground.

The FAA has instituted a series of surveys to enable it to keep abreast of the noise performance of the various helicopter models and to assemble a body of data for use in estimating the community noise contributions of actual and projected helicopter operations and facilities. Extensive surveys have been performed in New York City and in Phoenix, Arizona, and smaller surveys have been performed in several other places.

This report describes surveys of non-military helicopter noise at and near helipads in five metropolitan areas: Chicago, IL; Long Beach, CA; New Orleans, LA; Portland, OR; and Seattle, WA. In each metropolitan area, noise measurements were made at three or four heliports or helipads. At each heliport or helipad, three noise monitoring stations were set up in a linear array at distances of approximately 150 feet, 300 feet and 450 feet from the helipad along a suitable approach or departure flight path. (Where possible, a commonly used flight path was selected. In some cases, it was not feasible to set up stations along a commonly used path.) The stations were used to measure and record noise levels during the performance of a standard series

located at airports the effect of helicopter noise on the residential areas around airports comes primarily from helicopter overflights into, not from helipad operations.

Each metropolitan area surveyed is the subject of a separate chapter of this report. In addition to the noise measurement data obtained, each chapter provides data on location, frequency of helicopter operations, and type of helicopter operations at every identifiable helipad or heliport in regular civilian use in the metropolitan area. Information is also provided on any helicopter noise abatement procedures in effect and any available noise complaint statistics. For each helipad or heliport where noise measurements were made, the land use in the vicinity is described.

In all, noise measurements were obtained at 18 helipads for eight helicopter models. The measurements are summarized in Table 1 which reports the highest value of Lmax (Maximum Noise Level) recorded at Station 1, for each test site.

Values of Lmax at Station 1 ranged from 89.1 to 103.4 dB(A). This wide range is attributable to several factors: the use of different helicopter models in the tests; differences in the distance from Station 1 to the helipad; differences between the elevation of Station 1 and the helipad; differences in the helicopter angle of approach or take-off; deviation of approach or departure path from the direction of the line of measurement stations; and differences in ground surface and structures affecting sound propagation. Two other reasons for variation are indicated in the table: the maneuver being performed when the largest Lmax value was recorded, and the distance from the helipad to Station 1. (This distance is greater than the distance from the helicopter to Station 1 when the longest Lmax occurs during an approach or take-off.)

published by the Helicopter Association International as guidelines to be used by helicopter pilots operating in the state. [Source: 1984 - 85 Illinois Airport Directory, Illinois Department of Transportation, pp. 153 - 154.]. These include:

- Following high ambient noise routes (highways, railroads, etc.);
- Following unpopulated routes (waterways, etc.);
- Maintaining altitude (1000 ft.) where possible;
- Reducing speed;
- Observing low noise speed/descent settings;
- Avoiding sharp maneuvers;
- Varying flight routes; and
- Using steep takeoff/descent profiles.

According to information obtained from helicopter operators and airport and city officials, there are currently 14 helipads located in the Chicago metropolitan area. Eight of the helipads are located in the downtown Central Business District (CBD), four in the southern part of the city, and two in the northern part of the city. Figure 7.1 shows the street map locations of these helipads. Noise measurements were obtained for standardized helicopter maneuvers at locations 1 through 4.

The eight helipads located in the CBD include one at the Continental Bank corporate office, one at Cook County Hospital, two at Chicago Fire Department locations, and four public use helipads at Meigs Field Airport.

The Continental Bank helipad is at street level and is used mainly for transporting bank executive personnel. Occasionally it is used by non-bank helicopter operators transporting executives to and from the CBD. The number of operations at this helipad averages between two and three per day. The helipad is at the intersection of two large downtown streets adjacent to railroad tracks. Other land use in the vicinity consists of commercial and light manufacturing businesses.

U
a small residential neighborhood located south of the Lakefront Airport which is located on the Lake Ponchartrain shore in the northern part of the city.

Many of the helicopter operations at the Lakefront Airport involve flying over this neighborhood at an altitude of between 300 and 500 feet. (Section 8.3 contains noise level data obtained from several flights over this neighborhood.) In an effort to minimize the noise impact from helicopter operations on residential neighborhoods near the airport, the FAA and the Lakefront Airport Manager have established recommended noise abatement procedures for helicopter pilots. These procedures require that:

- All helicopter pilots maintain an altitude of at least 300 feet before beginning their descent into the airport;
- Helicopter pilots depart and approach the airport from the east and west over Lake Ponchartrain whenever possible;
- Pilots fly over major highways and waterways whenever possible;
- Pilots use operational procedures recommended in the "Fly Neighborly Program" ("Fly Neighborly Program", Helicopter Association International, February 1982).

According to operations data obtained from helicopter operators and the FAA, there are currently 9 operational helipad facilities located in the New Orleans area. Figure 8.1 shows their locations. Five of the facilities are located at Lakefront Airport. Four of these are operated by private helicopter companies: Pumpkin Helicopter, Inc. (Location 1), Chevron Oil (Location 2), Sue West Airways, Inc. (Location 5) and Jet America (Location 6). The fifth is operated by the Louisiana National Guard (Location 3). Noise measurements for the standardized helicopter noise test maneuvers were obtained at Locations 1 and 2.

(Table 5.13 continued)

| Event Description | [Location*] (in feet) | Estimated Measurement | | Leq | SEL | Lmax |
|---|-----------------------|-----------------------|------------|------|------|------|
| | | Altitude | [Duration] | | | |
| Bell 206B ground idle 110' away. | 4 | NA | 25 | 67.4 | 81.3 | 69.1 |
| Bell 206B takeoff beginning 110' away and heading away from station. | 4 | 30 | 14 | 78.6 | 88.1 | 82.1 |
| Same operation as above beginning 250' away, flying toward station, then turning back in opposite direction. | 4 | 30 | [1] | [1] | [1] | 84 |
| Bell 206B Jet-ranger III(modified from Jetranger II) takeoff beginning 110' away and heading away from station. | 4 | 30 | 18 | 84.4 | 87.2 | 81.3 |

All noise data were recorded with A-frequency weighting and slow response time averaging.

* = See Figure 5.10 for station locations.

[1] = Noise levels measured with the CNA which is not capable of recording measurement duration, Leq, and SEL readings for single events.

[2] = Not able to estimate altitude.

TABLE 8.13 NOISE DATA FOR ACTUAL IN-SERVICE HELICOPTER OPERATIONS MONITORED HELIPAD TEST SITES

| Event Description | Locations* | Estimated Measurement | | | | | |
|---|-------------------|-------------------------|-----------------------|-----------------|------|------------------|--|
| | | Altitude [in feet] | Duration [seconds] | L _{eq} | SEL | L _{max} | |
| Messerschmitt BO 105 flyover northeast to southwest 700' away. | 1 (Station 2) | 300 | 5 | 57.1 | 64.1 | 58.8 | |
| Messerschmitt BO105 approach from south 227 ft. away. | 1 (Station 2) | 75 (at touchdown) | 41 | 75.1 | 91.2 | 80.5 | |
| Same as above, 372 ft. away. | 1 (Station 2) | 75 (at touchdown) | 14 | 75.4 | 64.8 | 77.4 | |
| Same as above, 518 ft. away. | 1 (Station 3) | 75 (at touchdown) | [1] | [1] | [1] | 72 | |
| Small helicopter flyover from south to north 800' away. | 2 (Station 3) | 500 | [1] | [1] | [1] | 68 | |
| Bell 208B approach from south to north and landed 435' away. | 2 (Station 3) | 10 | [1] | [1] | [1] | 82 | |
| Medium size halo flyover east to west overhead. | 2 (Station 3) | 500 | [1] | [1] | [1] | 74 | |
| Medium size halo flyover 800' away. | 2 (Station 3) | 500 | [1] | [1] | [1] | 66 | |
| Bell 208B landing 435 ft. away from east to west. | 2 (Station 3) | 10 | [1] | [1] | [1] | 74 | |
| Bell 208B flyover south to north 700 ft. away. | 2 (Station 3) | 500 | [1] | [1] | [1] | 61 | |
| Same as above, 188 ft. away. | 2 (Station 3) | 300 | [1] | [1] | [1] | 65 | |
| Bell 208B north to south 800' away. | 13 (Station 1) | 500 | 15 | 55.8 | 67.5 | 60.8 | |

All noise data recorded with A-frequency weighting and slow response time averaging.

* See Figures 8.1 and 8.2 for station locations.

[1] Noise levels measured with the CNA which is not capable of recording measurement duration, L_{eq}, and SEL for single-event.

TABLE 6.13 (continued)

| Event Description | Location* | Estimated | | Measurement | | L _{eq} | SEL | L _{max} |
|---|-----------|-----------------------|-----------------------|-----------------|------|-----------------|-----|------------------|
| | | Altitude (in feet) | Duration (seconds) | L _{eq} | SEL | | | |
| Aguusta A100A approach and landing (Station 1) 150 ft. away. | 13 | 40 | 20 | 83.8 | 96.8 | 88.1 | | |
| Same as above, 324 ft. away. (Station 2) | 13 | 40 | 28 | 78.0 | 93.4 | 83.1 | | |
| Aguusta A100A flyover 300' away. (Station 1) | 13 | 300 | 11 | 77.4 | 87.8 | 80.2 | | |
| Same as above, (Station 2) | 13 | 300 | 20 | 75.8 | 88.5 | 80.8 | | |
| Aguusta A100A hovering facing west 600' away. (Station 1) | 13 | 300 | 21 | 62.7 | 75.9 | 68.1 | | |
| Aguusta A100A hovering facing west (Station 1) 400 ft. away. | 13 | 30 | 28 | 71.7 | 86.1 | 77.9 | | |
| Aguusta A100A approach from north (Station 1) to south and landed 150 ft. away. | 13 | 40 | 29 | 84.8 | 98.2 | 88.2 | | |
| Same as above, 324 ft. away. (Station 2) | 13 | 40 | 51 | 78.8 | 96.3 | 83.8 | | |
| Hughes 500D takeoff to east 600' away. (Station 3) | 3 | 50 | [1] | [1] | [1] | 78 | | |
| Hughes 500D warmup 500 ft. away. (Station 3) | 3 | N/A | [1] | [1] | [1] | 60 | | |
| Hughes 500D 100% takeoff idle 500' away. (Station 3) | 3 | N/A | [1] | [1] | [1] | 71 | | |
| Hughes 500D flyover from west to east. (Station 3) | 3 | 150 | [1] | [1] | [1] | 74 | | |
| Hughes 500D approach 500 ft. away west to east. (Station 3) | 3 | 150 | [1] | [1] | [1] | 80 | | |

ALL noise data recorded with A-frequency weighting
and slow response time averaging.

* See Figures 6.1 and 6.2 for station locations.

[1] Noise levels measured with QNA which is not capable
of recording measurement duration, L_{eq}, and SEL for single-event.

TABLE 8.13 (continued)

| Event Description | Location | Estimated Measurement | | L _{eq} | SL | L _{max} |
|--|------------------|-----------------------|-----------------------|-----------------|------|------------------|
| | | Altitude (in feet) | Duration (seconds) | | | |
| Same as above. | 3 (Station 2) | 150 | 30 | 73.6 | 66.3 | 64.8 |
| Hughes 5000 flyover 300 ft. away. | 3 (Station 2) | 500 | 11 | 81.0 | 71.4 | 63.5 |
| Same as above. | 3 (Station 2) | 500 | 8 | 60.9 | 69.9 | 63.8 |
| Hughes 5000 flyover east to west 600' away. | 3 (Station 1) | 500 | 8 | 60.9 | 69.9 | 63.8 |
| Hughes 5000 flyover south to north 600 ft. away. | 3 (Station 1) | 500 | 7 | 66.8 | 75.4 | 69.8 |

All noise data recorded with A-frequency weighting

TABLE 7.13 NOISE DATA FOR IN-SERVICE HELICOPTER OPERATIONS AT PUBLIC USE HELIPORT MEIOS FIELD AIRPORT

| Event Description | Location* | | | Estimated | | Measurement | | SEL | Lmax |
|---|-----------|--|--|-----------------------|-----------------------|-------------|------|------|------|
| | | | | Altitude (in feet) | Duration (seconds) | Leq | | | |
| Bell 206B approach, | 1 | | | 40 | 25 | 04.2 | 00.2 | 00.0 | |
| Same as above, | 2 | | | 50 | 25 | 00.7 | 04.7 | 03.3 | |
| Same as above, | 3 | | | 50 | [1] | [1] | [1] | [1] | 08 |
| Hughes 500D approach, | 1 | | | 40 | 38 | 03.7 | 00.4 | 00.5 | |
| Same as above, | 2 | | | 50 | 38 | 01.2 | 00.7 | 07.7 | |
| Same as above, | 3 | | | 50 | [1] | [1] | [1] | [1] | 00 |
| Hughes 500D idle(north) 50' away. | 1 | | | NA | 10 | 70.2 | 00.2 | 70.3 | |
| Same as above 200' away. | 2 | | | NA | 33 | 67.0 | 03.1 | 70.1 | |
| Hughes 500D idle(north) 50' away. | 1 | | | NA | 13 | 78.5 | 00.7 | 78.5 | |
| Same as above 200' away. | 2 | | | NA | 10 | 60.7 | 01.4 | 71.2 | |
| Hughes 500D and Bell 206B at ground idle within 25' of each other and 50' away from microphone. | 1 | | | NA | 18 | 78.8 | 01.8 | 80.1 | |
| Same as above 200' away. | 2 | | | NA | 12 | 77.5 | 00.3 | 70.5 | |
| Same two helicopters as above at flight idle 50' away from microphone. | 1 | | | NA | 14 | 03.7 | 05.1 | 05.7 | |
| Hughes 500D flyover, | 1 | | | 500 | 23 | 00.0 | 00.4 | 00.0 | |
| Same as above, | 2 | | | 500 | 27 | 00.5 | 00.8 | 00.0 | |
| Bell 206B approach to airport, | 4 | | | 500 | 32 | 00.7 | 01.7 | 00.0 | |

ALL noise data were recorded with A-frequency weighting and slow response time averaging.

* Location numbers refer to location numbers on Figure 7.22.

[1] Noise levels measured with the CNA which is not capable
of recording measurement duration, Leq, and SEL for single events.

TABLE 7.14 NOISE DATA FOR ACTUAL IN-SERVICE HELICOPTER OPERATIONS

| Event Description | Location* | Estimated | | Measurement | | | L _{Max} |
|--|------------------|-----------------------|-----------------------|-----------------|------|------|------------------|
| | | Altitude [in feet] | Duration [seconds] | L _{eq} | SEL | | |
| Bell 206B approach from east 20' east & parallel to array. | 1 (Station 1) | 40 | 25 | 80.7 | 84.2 | 85.4 | |
| Bell 206B takeoff to west 20' south and parallel to array. | 1 (Station 1) | 30 | 13 | 82.5 | 83.8 | 87.0 | |
| Same as above. | 1 (Station 2) | 40 | 14 | 83.8 | 85.1 | 80.1 | |
| Same as above. | 1 (Station 3) | 30 | [1] | [1] | [1] | 85 | |
| Bell 206B Flyby 500' away. | 1 (Station 1) | 500 | 12 | 80.1 | 78.0 | 88.2 | |
| Same as above. | 1 (Station 2) | 500 | 14 | 85.2 | 78.7 | 80.8 | |
| Same as above. | 1 (Station 3) | 500 | [1] | [1] | [1] | 80 | |
| Bell 206B approach from east. | 1 (Station 1) | 40 | 14 | 83.8 | 85.1 | 80.1 | |
| Same as above. | 1 (Station 2) | 40 | 20 | 87.3 | 80.3 | 74.0 | |
| Same as above. | 1 (Station 3) | 40 | [1] | [1] | [1] | 71 | |
| Enstrom F28 warmup 450' away. | 1 (Station 3) | NA | [1] | [1] | [1] | 85 | |
| Enstrom F28 hovering 450' away. | 1 (Station 3) | 30 | [1] | [1] | [1] | 72 | |
| Same as above. | 1 (Station 3) | 30 | [1] | [1] | [1] | 80 | |

ALL noise data recorded with A-frequency weighting and slow response time averaging.

* See Figure 7.23 for station locations.

[1] Noise levels measured with the CTA which is not capable of recording measurement duration, L_{eq}, and SEL for single-event.
